

“Refresh Blocker” Firefox extension fork

[One of my friends](#) was talking me about the “auto meta refresh” of some websites like LeMonde.fr, and I was looking for a way to block it. The RefreshBlocker Firefox extension is the perfect tool for it.

But it displays an annoying notification in the header of the pages :

So I made a fork of this extension, to remove the notification : [RefreshBlocker 0.8 \(“no notifications” version\)](#)

(the original add-on is located on [its page on the Firefox plugins website](#))

Some similar plugin exists for Chrome : [Stop AutoRefresh](#)
